Laboratory measurements of the reduction of transmitted impact noise by floor coverings on a heavyweight reference floor
Annex TS – Impact sound insulation

Date of test: 14.10.2019

Construction: Amtico Signature 2,8 mm
(from top to bottom) Jumpax HD 10 mm
PE-foil

Remarks: Tested with weights.

Receiving room:

Volume: 53,6 m³

Source room:

Volume: 52,1 m³

Air temperature: 20,0 °C

Relative air humidity: 62,0 %

Boundary conditions:

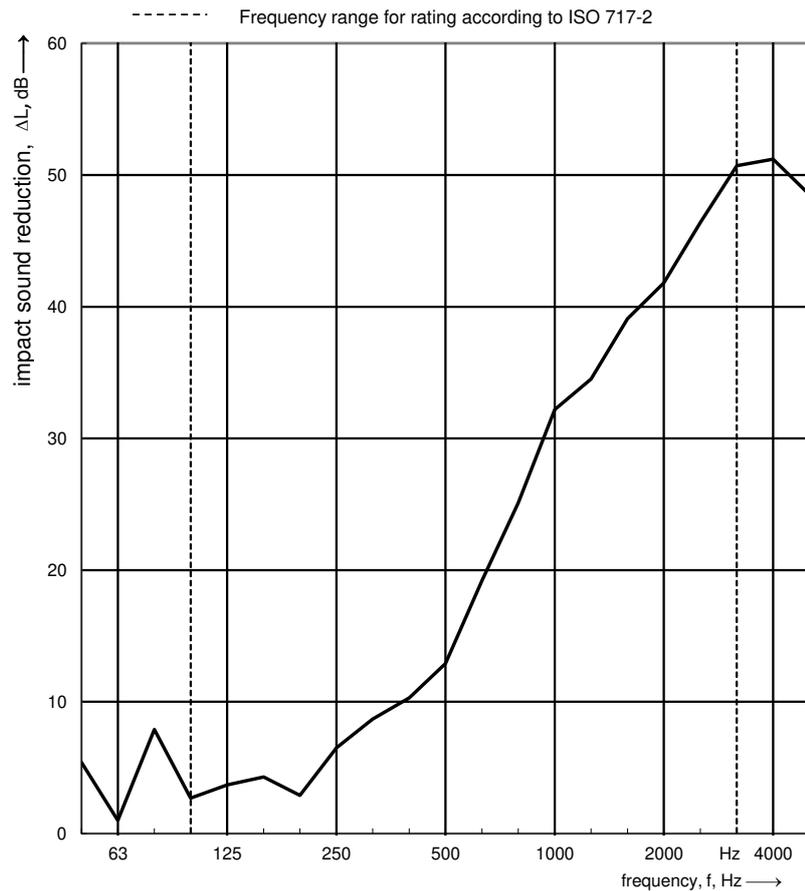

Tapping Machine positions: 4

Microphone positions: 4

Category / sample area: II / ~ 10 m²

Type of reference floor: Heavyweight

General Annex TS for laboratory impact sound tests

1 Test stand description

Test rooms:	Laboratory of SWA GmbH, Hauptstraße 133, 52477 Alsdorf
Sending room:	4,27 m x 4,45 m x 2,74 m; V = 52,1 m ³ (cubic, with diffusers)
Receiving room:	3,95 m x 4,08 m x 3,33 m; V = 53,6 m ³ (cubic, with diffusers)
Reference ceiling:	4,27 m x 4,45 m; S = 19 m ² 14 cm concrete solid plate ceiling with an area-related mass m' ≈ 322 kg/m ²
Flanking walls:	lime sand brick walls with light weighting facing shells (d = 12cm) with a medium area-related mass of m' ≈ 330 kg/m ²

2 Analysis

The impact sound levels generated by the standardized tapping machine are measured in the receiving room under a solid ceiling without and with a textile floor covering. From the measured values the reduction of impact sound pressure is calculated as follows:

$$\Delta L = L_{n,0} - L_n \text{ in dB}$$

$$L_{n,0} = \text{Impact sound level without floor covering in dB}$$

$$L_n = \text{Impact sound level with floor covering in dB}$$

To determine the weighted impact sound reduction the applicable reference curve is shifted in 1 dB steps into the measured curve so that the sum of the most unfavorable deviations corresponds as close as possible to the value of 32 dB without exceeding this value.

The linear impact sound level ΔL_{lin} you can calculate after the following equation:

$$\Delta L_{lin} = L_{n,r,0,w} + C_{I,r,0} - (L_{n,r,w} + C_{I,r}) = \Delta L_w + C_{I,\Delta}$$

$L_{n,r,w}$ the calculated weighted norm impact sound level of the cover blanket with the blanket edition to be checked is.

$L_{n,r,0,w}$ 78 dB, investigates $L_{n,r,0}$ to 4.3.1 DIN EN ISO 717-2 : 2013.

$C_{I,r}$ Spectrum customization value.

$C_{I,r,0}$ Spectrum customization value.
